Career Objective

Motivated Computer Science graduate with hands-on experience in Data Science, Machine Learning, SQL, and Power BI. Skilled in data preprocessing, exploratory data analysis, feature engineering, and predictive modeling. Seeking an entry-level role in Data Science, Data Analytics, or Business Intelligence where I can apply analytical and problem-solving skills to deliver insights from real-world data.

Projects

IPL End-to-End Analytics | Python, SQL, Power BI | [Link](#)

- Analyzed 18 IPL seasons (1,169 matches, 278K+ ball-by-ball records) using Pandas, NumPy, Matplotlib, and Seaborn for data cleaning, EDA, feature engineering, and statistical testing.
- Performed SQL queries and Z-tests on toss decisions, revealing chasing teams win 52.6% of matches; identified avg. 1st innings score of 167 runs.
- Highlighted top performers: Virat Kohli (run-scorer), Yuzvendra Chahal (wicket-taker); tracked rising run rates across seasons.
- Developed interactive Power BI dashboards for team performance, player stats, and venue analysis to enable data-driven sports insights.

Laptop Price Prediction | Python, Machine Learning | [Link](#)

- Performed data cleaning and Handled missing values and outliers to improve model reliability
- Built regression models including Random Forest and Gradient Boosting to predict laptop prices using hardware specifications.
- Applied feature engineering and hyperparameter tuning to improve model performance.
- Achieved R^2 score of 0.88 with RMSE of 0.21 using a tuned Gradient Boosting model.
- Implemented a user-input-based prediction workflow to simulate real-world pricing scenarios

Hotel Booking Cancellation Analysis | Excel | [Link](#)

- Analyzed 119K+ hotel booking records to study cancellation behavior and revenue impact
- Calculated KPIs including cancellation rate (37%), revenue lost (16.7M), and late cancellation percentage
- Performed analysis by lead time, customer type, market segment, hotel type, seasonality, and year-wise trends
- Built an interactive Excel dashboard using pivot tables, charts, slicers, and KPI cards
- Identified high-risk booking patterns and proposed risk-based cancellation policies

Retail Customer Behavior Analysis | Power BI | [Link](#)

- Analyzed 3.9K transactions and \$233K sales data to understand customer purchasing behavior and revenue drivers.
- Identified 55.9% repeat purchase rate and segmented high-value customers to support targeted marketing strategies.
- Built Power BI dashboards evaluating product categories, sales channels, and discount impact on customer loyalty.

Skills

Programming: Python, SQL, C, Data Structures

Data Analysis: Data Cleaning, Exploratory Data Analysis, Feature Engineering, Statistical Analysis

Visualization: Power BI, Excel

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Tools: Jupyter Notebook, Git, GitHub, Microsoft Office

Soft Skills: Communication, Time Management, Leadership, Research

Languages: English, Telugu, Hindi

Education

Bachelor of Technology (B.Tech) — Computer Science and Engineering

Rajiv Gandhi University of Knowledge Technologies (RGUKT), Ongole
CGPA: 8.9

2019–2023

Certifications

Certified Data Science Professional — OdinSchool

Data Science Certification — Internshala

Python (Basic) — HackerRank
